In Memoriam: Roy M. Huffngton (1918-2008)

SMU Geology Alumnus Roy M. Huffngton died in July 2008 at the age of 90. After completing the PhD in geology at Harvard in 1943, Roy served with distinction on the staff of Admiral Spruance where he saw action during the war in the Pacifc. He joined the exploration staff of the Humble company after being mustered out of the Navy. Even though he was assured that he had a bright future with the Humble he left the company and became an independent explorationist. His gas discoveries in Indonesia are legendary as are his development of the Liquefed Natural Gas market in Japan and elsewhere. For these accomplishments Roy received widespread recognition from most of the major energy organization in the United States and beyond.

Huff ngton's work in international energy development and his ability to move effectively in international diplomatic and commercial circles led to his appointment by President George H. W. Bush as U. S. Ambassador to Austria. This was at a time when eastern Europe was just beginning to open up as the Soviet Union began its fnal changes. Roy's diplomatic work extended well beyond Austria and was instrumental in establishing U. S. relations with the countries east of the Iron Curtain. For this work a number of foreign governments recognized Huffngton's contributions.

Roy was generous to many organizations but especially to SMU alma mater both for him and for his wife, Phyllis. Roy's fnal gift endowed the Department of Geological Sciences as the **Roy M. Huffngton Department of Earth Sciences**. Roy was very interested in and supportive of the **Institute for the Study of Earth and Man**. His last participation with the Institute included participation on the ISEM trip to Iceland in 2006.

Roy was active to the very end of his life and was a stimulating companion whether visiting over a business lunch, sitting on the deck of a fishing boat in Alaska, or standing atop the Mid-Atlantic Ridge in Iceland. His legacy will always be appreciated and the shared moments with Roy will always be cherished.

RESOLUTION IN MEMORY OF ROY M. HUFFINGTON

The Board of Trustees of the ISEM notes with profound sadness the death of Roy M. Huffngton on July 11, 2008. The Board acknowledges with deep appreciation Roy's friendship, his participation in many ISEM activities and his significant contributions to numerous programs and activities of importance to the Institute.

"In my opinion, the most creative research at a university is done by the most energetic investigator by which I mean graduate students. Those are who we can support best." Dr. Louis L. Jacobs, Preside	
What some of our students say	
I would like to thank ISEM for its support of my PhD research at the site of Santa Rita B in the Chao Valley on the north coast of Peru. The Incas employed a variety of strategetyhrveyc8
