

The Kinetic Energy Potential of Pressurized Natural Gas Wells

Robert D. Hunt[\[1\]](#)

Founder and Chief Scientist for

Kinetic Energy Potential of High-Pressure High Flow-Rate Gas Wells for Producing MW's of Electricity

Computation of the ideal power produced by pressurized gas Methane (M=16 kg/kmol)

| High Pressure Gas Wells | | | |
|--|----------------------|---------------------|---------------------|
| Enter Flowrate in Mcfd | 10,000 | 6,000 | 2,000 |
| Volumetric flow rate in cfs: | 115.7 | 69.4 | 23.1 |
| Enter Pressure in psig: | 7000 | 5000 | 3000 |
| Pressure ratio for expansion to 15 psig | 0.0021 | 0.0030 | 0.0050 |
| Enter Temperature in degrees Fahrenheit: | 150 | 150 | 0 |
| Temperature in degrees Kelvin | 338.6 | 338.6 | 255.2 |
| Equals Power Produced in Megawatts (MW) | 359 | 150 | 33 |
| Equals MW Hours Per Year | 2,988,395 | 1,247,621 | 272,496 |
| Equals Annual Profits @ 2.5-cents/kWh | \$149,419,771 | \$62,381,026 | \$13,624,814 |
| Expected Temperature w/ isentropic expansion turbine | 82.32 | 88.94 | 75.41 |
| Expected Temperature in degrees Fahrenheit | -311.23 | -299.30 | -323.65 |
| Ideal work (kJ/kg) | 577.56 | 562.62 | 405.29 |
| volumetric rate in m ³ /s | 3.28 | 1.97 | 0.66 |
| mass flow rate in kg/s | 888.21 | 380.66 | 100.99 |
| mass flow rate in lb/s | 1954.06 | 837.45 | 222 |

Three high-pressure, high flow rate natural gas wells of the magnitude of the well presented in Column One has the kinetic energy potential to generate as much power as a nuclear power plant that would cost billions of dollars to build!

Problems Associated with the use
of Rotating Equipment in regard
to Harnessing the Potential
Energy of Natural Gas Wells are:

Centrifugal Forces try to Rip the
Equipment Apart

End Thrust

Inability to Process Dual-Phase Working Fluids

Three components comprise the linear power equipment used to harness the kinetic energy of natural gas wells:

(1) a linear alternator that is driven back-and-forth by a pneumatic ram in order to generate 60 Hz AC electrical power; and, (2) a pneumatic ram prime mover, being a movable piston and rod within a cylinder that is actuated by a (3) driver that controls the flow of high-pressure natural gas into the cylinder of the ram and directs the exhaust flow from the cylinder.
