### Sediments and water

Ms. Hamid has been teaching her 8<sup>th</sup> grade students about the water cycle and how it affects the environment. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production.

Ms. Hamid has been teaching her 8<sup>th</sup> grade students about photosynthesis, and induced. She sets up an example to illustrate this. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production.

### Photosynthesis

Ms. Hamid has been teaching her 8<sup>th</sup> grade students about photosynthesis, and induced. She sets up an example to illustrate this. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production.

Ms. Hamid has been teaching her 8<sup>th</sup> grade students about photosynthesis, and induced. She sets up an example to illustrate this. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production.

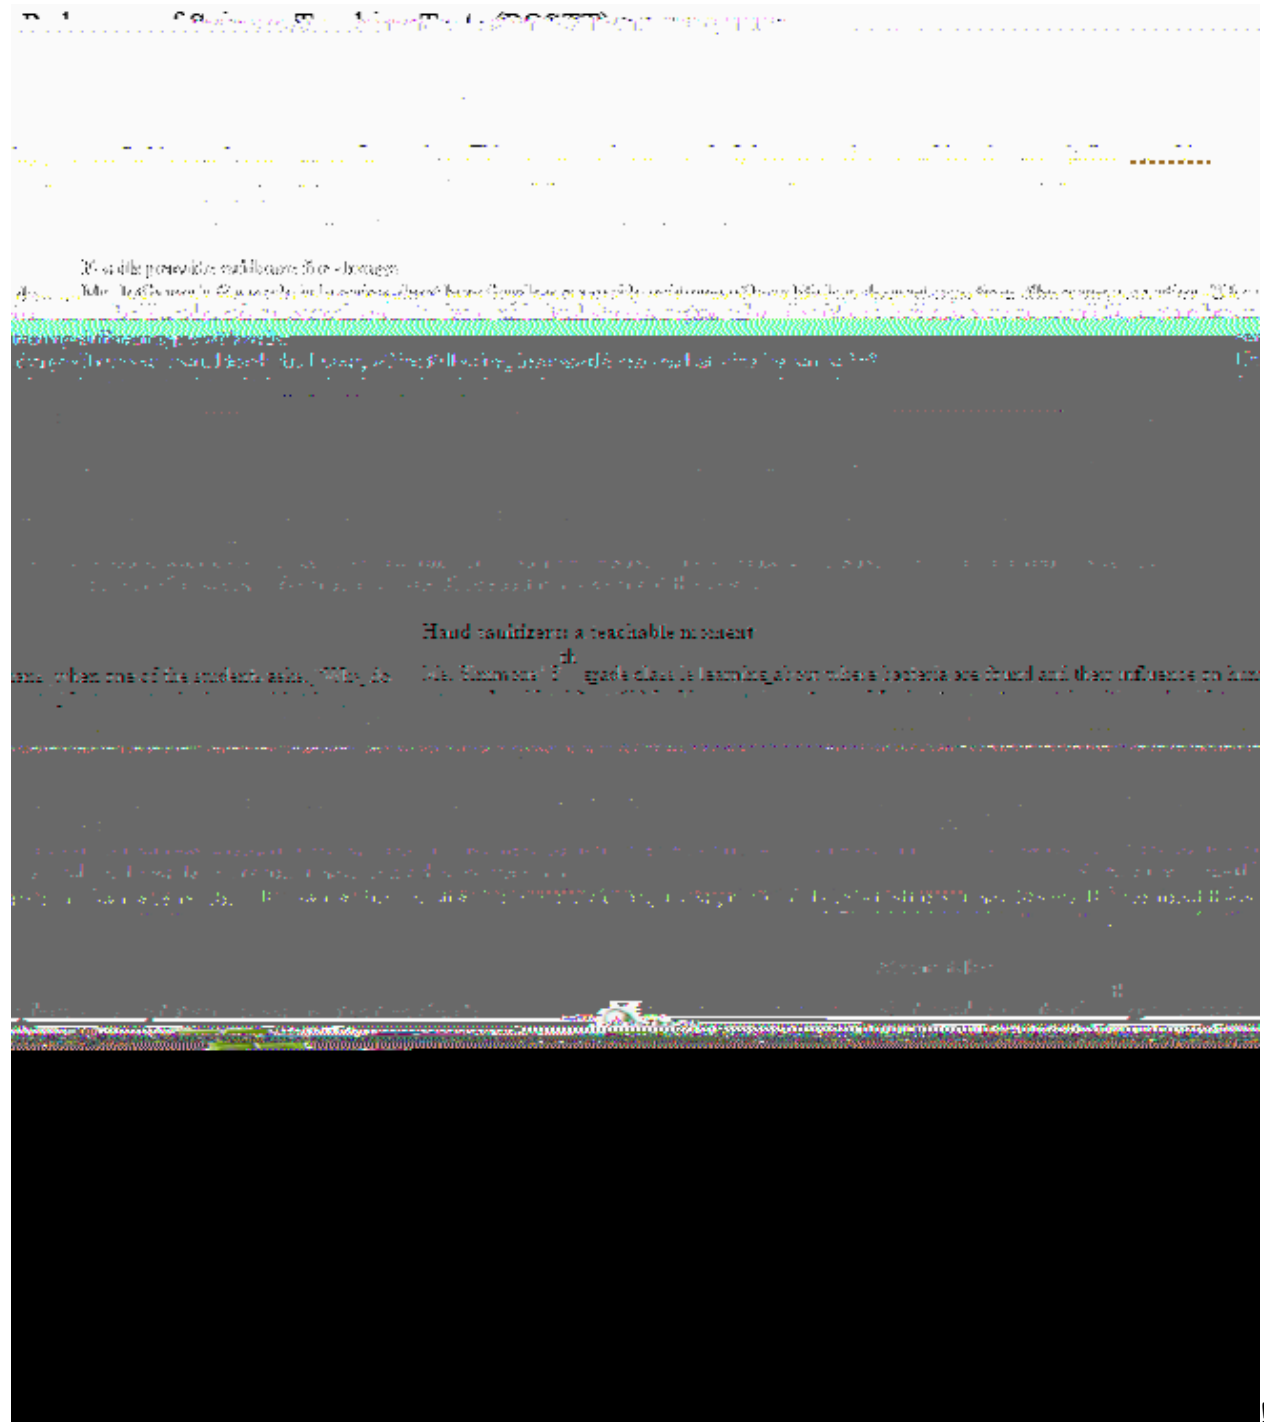

Ms. Hamid has been teaching her 8<sup>th</sup> grade students about photosynthesis, and induced. She sets up an example to illustrate this. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production.

### Plants and life

Ms. Hamid has been teaching her 8<sup>th</sup> grade students about photosynthesis, and induced. She sets up an example to illustrate this. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production. She has placed fast-growing seedlings where they are exposed to different levels of light to see the effect of light on chlorophyll production.

### Bacteria

Ms. Simon's 8<sup>th</sup> grade class is studying bacteria. She tells her students that it is important to wash our hands before eating, even though we cannot see bacteria on them. Ms. Simon explains that, although we cannot see individual organisms, given nutrients, thousands more bacteria

can be seen on a petri dish. She shows them a petri dish with a culture of bacteria. The bacteria are growing in a line, and she explains that this is because the bacteria are growing in a line. She shows them another petri dish with a culture of bacteria. The bacteria are growing in a line, and she explains that this is because the bacteria are growing in a line.

She shows them a third petri dish with a culture of bacteria. The bacteria are growing in a line, and she explains that this is because the bacteria are growing in a line. She shows them a fourth petri dish with a culture of bacteria. The bacteria are growing in a line, and she explains that this is because the bacteria are growing in a line.

### Frog dissection 1

Mr. Goodchild is doing a frog dissection with his 8<sup>th</sup> graders to help teach them about anatomy.

Thinkers about how you would teach a lesson of the following which is most similar to what you believe is the best way to incorporate a

variety of learning styles. The first is a traditional lecture where the teacher stands at the front of the room and talks to the students. The second is a hands-on activity where the students are given a task to complete. The third is a group project where the students work together to complete a task. The fourth is a role-play where the students act out a scene.

### Comets

Comets are small, icy bodies that orbit the sun. They are made of dust and ice. When they get close to the sun, the ice melts and they create a long tail of gas and dust. Comets are visible in the night sky. They are often called "dirty snowballs".

What is an atom like?

Ms. Dalton taught her 8<sup>th</sup> grade students that matter is made of atoms. She then asked what an atom itself might be like. She wants
